DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1- 23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding Claim 1 and 23 it is unclear/vague what "material outside the active region" is being claimed and how it relates to the claimed device.

Regarding Claim 21 and 22, these claim lacks any definite structure to facilitate the incorporation of a "gain means" and "heat spreading means" as claimed.

Accordingly, the claim is unclear/vague.

In addition, regarding Claim 22, the Applicant has claimed a "non section 112(6)" gain and heat-spreading means. The claim is vague/unclear because the meaning of "non-section-112(6)" is not clear. If this implies that the "means" claimed is not limited to what the specification discloses, then what is the Applicant claiming?

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Uchida (US 6057560).

Regarding Claims 1-12 and 21-23 Uchida discloses a device comprising:

an active region (104) having a bottom and a top surface, wherein the active region is disposed at its bottom surface on the substrate (Fig. 2) and the active region is for emitting light generated therein out of its top surface (col. 2, line 65- col. 3, line 8);
and

a heat-spreading layer (105; 1.5um thickness) disposed on a surface of the active region and in contact with material outside the active region, for removing heat (inherent feature of InP as disclosed in the Application specification) from the active region.

Regarding Claims 13-20, Uchida discloses a top DBR (106) and a bottom DBR (102) as claimed. In addition, the active region is electrically pumped (abstract).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Jiang et al. (US 5914973) and Coldren et al. (US 2002/0090016).
